

Thanks for checking out Blackout! Here's a quick setup guide.

To install:

1. Unzip the files using your preferred program such as WinRAR.
2. Open the directory you unzipped to and Drag the Blackout.nki into the Kontakt window.
3. ALTERNATIVELY you can use the Kontakt Files browser to navigate to the same folder and open it from there.
4. Do not use the Add Library function.
5. Requires the FULL VERSION of Kontakt 5.8.1 or later.

To use:

1. Blackout is tempo-synced to your DAW, use the speed controls on the bottom left to halve or double the playback rate (useful for very fast or very slow BPMs).
2. Play a loop using one of the Blue keys.
3. Adjust pitch using one of the Green keys.
4. All FX are automatable within your DAW.
5. Have fun.

This instrument is not designed to be overly fancy or boast a massive library of multi-velocity sounds, it is designed to provide extremely quick pulse-based rhythms within a very small, compact and efficient interface.
