

VEIL Manual

Instant Sonics

Description

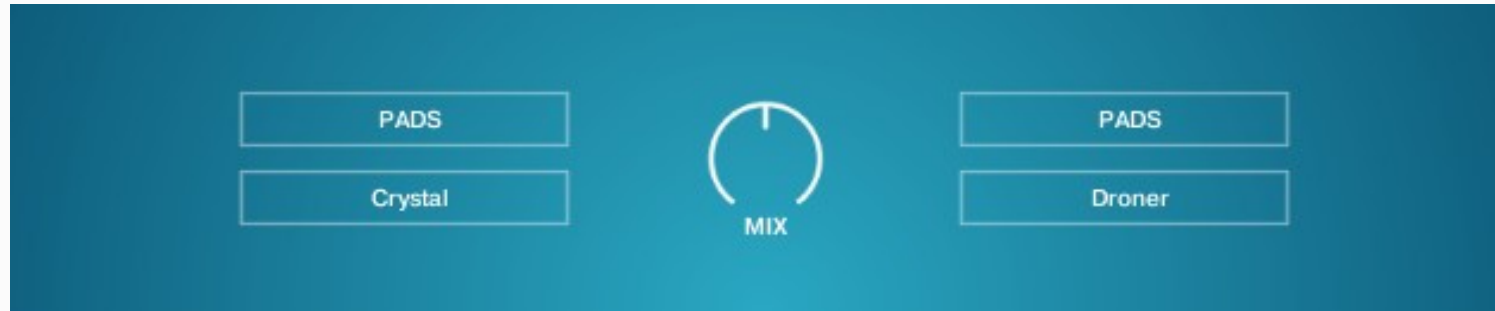

Veil is a hybrid scoring tool for creating atmospheric textures and cinematic pads.

Packed with 150+ single samples, Veil delivers a great variety and flexibility in sound. In addition, built-in functions and effects like gating, stereo control, dynamics, filters, distortion and reverb morph the sound conveniently and effectively.

Interface

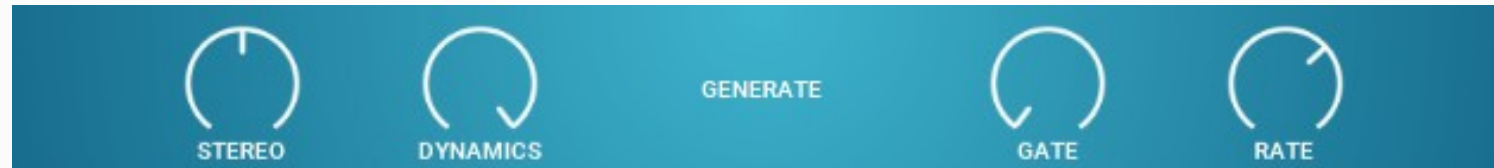

Sound Sources

In higher part of the interface you can choose two sound sources to stack them. All sources are divided into 4 banks: pads, plucks, rhythmic and other.

Mix button allows you to control crossfade of the sound sources.

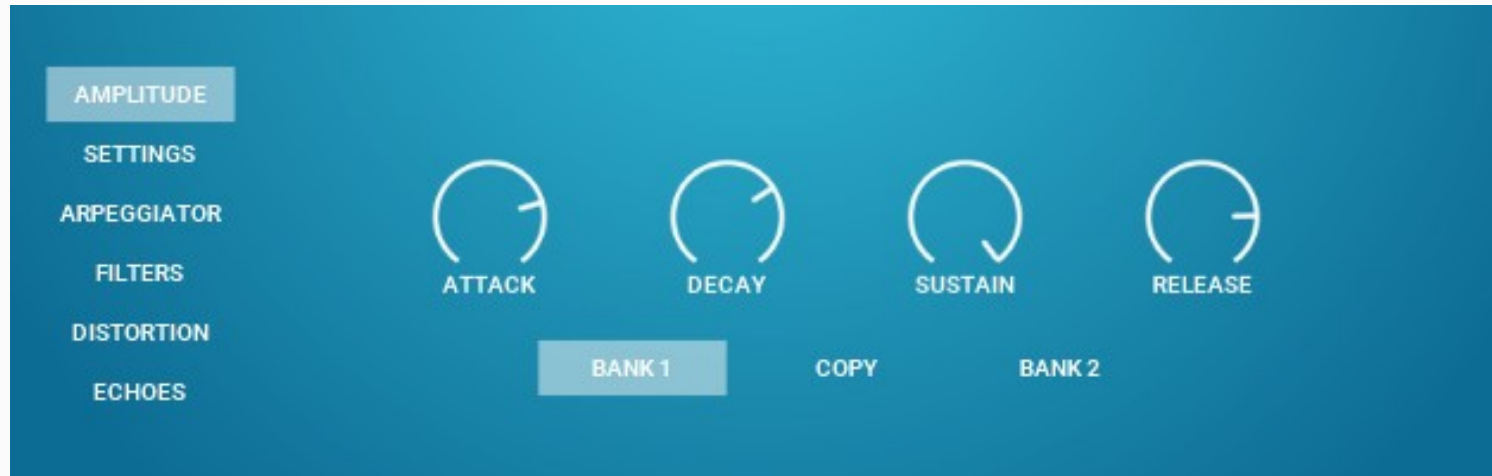

General Controls

In the middle part of the interface there are following controls:

- Stereo – controls the width of sound;
- Dynamics – controls intensity of sound;
- Gate & Rate – control the parameters of the gating tool;
- Generate – randomizes selection of sound sources and effects.

Tools & Effects

In the lower part of the interface there are 6 effects and tools: amplitude controls, per-source settings, arpeggiator, filters, distortion and echoes (delay and convolution). Each of them contains its own controllers.

In amplitude and settings there are Bank 1, Bank 2 and Copy buttons for switching between sound sources and copying settings to the other (unselected) bank.

Thank you for purchasing Veil.

We hope you will like it.
